EMAIL PROTECTION AND ARCHIVING

Sophisticated Protection for Your Business at an Affordable Price

The most vulnerable vector for malicious business attacks is email - the communication lifeblood of most organizations. Our email protection solution provides continuously- updated spam and threat protection to effectively shield you 24/7. Even if you have a primary layer of security, as with Office 365, our service provides an additional layer of defense— inexpensive insurance to prevent spam, virus, and ransomware attacks through phishing and impersonation emails.

Key Features

- Rock solid reliability and stability with no historical downtime
- Continuously updated AV protection
- Built-in email continuity
- No hardware or software maintenance
- Simple, affordable, and flexible
- Rebranding of the product logo and color scheme for your company
- Detailed reporting that provides a clear, easily-searched view of all email activity
- Designed to look and work well on any device.

86% of all email traffic is Spam. The number one vector for virus delivery to the desktop is email.

In the event of a core email service outage, your users will be able to continue receiving, and sending emails without interruption.

Benefits of a Managed Email Protection & Archiving Service

Aggressive Spam and Malware Protection. Our service constantly updates our filtering engines using statistical and heuristic inputs from SMTP behavior, reputation checks, content checks, quarantine management, and more. Our spam filtering scans and analyzes all email, links, and attachments, and uses the outputs of those scans to update our spam database.

Always-on Continuity. Additionally, our solution provides always-on email continuity via our cloud-based portal to prevent any business and email disruption. Even if your primary email service fails, your users will be able to access, receive, and send email from any device.

Seamless Integration. Our email protection service seamlessly integrates with both Microsoft Office 365, Microsoft Exchange, or virtually any other email service, providing an extra layer of protection to your email.

Email Archiving. Beyond email security, we also provide an integrated email archive. All incoming, outgoing, and internal emails are "vaulted" for as long as you need, providing tamper-proof protection of your communications and intellectual property in the event of legal disputes or to meet regulatory requirements.

Why is a cloud-based solution better?

Cloud-based solutions are inherently distributed and redundant, virtually eliminating the risk of data loss. We can use cloud- based server centers ensured to be geo-located where you need them to be. And finally, cloud-based solutions are owned and maintained by others, keeping costs down for us, which means lower cost to you.
